DETAILED ACTION

Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1, 6, and 10-13, drawn to a device for manufacturing of a rotary cutting die, classified in class 83, subclass 523.
 - II. Claims 2-4 and 7-9, drawn to a method for manufacturing of a rotary cutting die, classified in class 83, subclass 13.
- III. Claim 5, drawn to a rotary cutting die, classified in class 83, subclass 469.

 The inventions are distinct, each from the other because of the following reasons:
- 2. Inventions II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, (1) applies because the process as claimed can be practiced by another and materially different apparatus such as a rotary cutting die formed only of solid plywood. This apparatus does not require internal panels in the lower plywood.
- 3. Inventions I and III are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this

Application/Control Number: 10/674,434

Art Unit: 3724

case (1) applies because the apparatus as claimed is not an obvious apparatus for

Page 3

making the product and the apparatus as claimed can be used to make a different

product such as a rotary cutting die in which 11 veneers are laminated. This product

does not require 9 veneers be laminated.

4. Inventions II and I are related as process and apparatus for its practice. The

inventions are distinct if it can be shown that either: (1) the process as claimed can be

practiced by another materially different apparatus or by hand, or (2) the apparatus as

claimed can be used to practice another and materially different process. (MPEP §

806.05(e)). In this case, the apparatus as claimed can be used to practice another and

materially different process such as manufacturing a rotary die wherein aluminum

sheets are attached to the cylinder. This process does not require plywood fixed on the

cylinder.

5. Because these inventions are distinct for the reasons given above and have

acquired a separate status in the art as shown by their different classification, restriction

for examination purposes as indicated is proper.

Election of Species

6. This application contains claims directed to the following patentably distinct

species of the claimed invention:

I. FIGS 1-5;

II. FIGS 6-10; and

III. FIGS 11-15.

Application/Control Number: 10/674,434

Art Unit: 3724

7. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Page 4

- 8. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.
- 9. Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
- 10. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
- 11. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Application/Control Number: 10/674,434

Art Unit: 3724

Conclusion

Page 5

12. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Carolyn T Blake whose telephone number is (703) 305-

0390. The examiner can normally be reached on M to F, 8:00 AM to 5:30 PM,

alternating Fri off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Allan N Shoap can be reached on (703) 308-1082. The fax phone number

for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
